

# CorreTrak Mobile 2.7.6

## Release Notes

### Enhancements

#### 1 Enhancement – Full Count Roster Functionality

The full count feature now displays a roster of all inmates who are expected to be present based on inmate's current location or housing location. As users scan inmates the CorreTrak mobile app will sort them into three categories:

- Uncounted – inmates that have not been scanned
- Counted – inmates that have been scanned
- Unexpected – inmates that have been scanned but were not expected at that location

This gives the users full transparency on the status of each inmate's location status and notifies them of any inmates who should not be present at that location. Users can move an unexpected inmate in the Counted category or remove them from the count entirely. Any discrepancies in the submitted count can be handled in CorreTrak Web's Count dashboard.

#### 2 Enhancement – Multiple QR Codes Associated with a Single Location

Multiple QR codes can now be associated with a specific jail location, which accommodates location scanning of any QR Code in the facility. Location scanning eliminates the need to manually select a required area/location when using certain modules of CorreTrak Mobile, like, Count or Movement, making user operations more efficient and accurate.

See CorreTrak Web enhancement #2 for additional details on QR code Location assignment configuration.

### **3 Enhancement – Pull Down Refresh and Last Sync Date/Time Banners in Count**

Screens now display on the banner the last complete synchronization date and time within the Count module. Additionally, CorreTrak Mobile users can pull down on the inmate roster screen to synchronize inmate count data.

## **Bug Fixes**

### **1 Late Cell Check Warning Message Not Appearing**

Resolved an issue where the pop-up message to indicate that the cell check appears to be late was not showing. The pop-up message now appears when the cell check is overdue.

### **2 Service Delivery Crashing When Filtering Area With No Active Inmates**

While receiving an outstanding item from an inmate who is inactive/released in the Service Delivery module, selecting filter would cause the CoreTrak mobile app to crash. Now selecting the filter will display the filter screen.
