

# CorreTrak Web 2.7.2

## Release Notes

### Enhancements

#### 1 Enhancement – Device Database Backups Dashboard

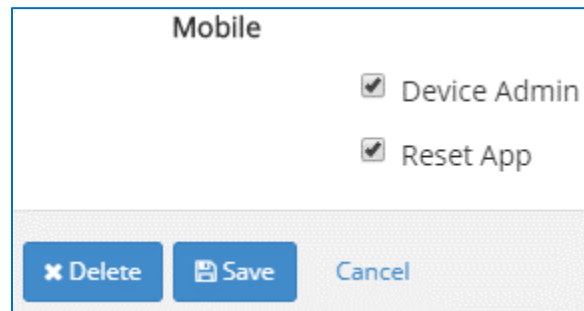

In CorreTrak Mobile, when the “Reset Application” button or “Back Up Databases” button is selected, the local SQLite databases will be zipped, and the file will be sent to the CorreTrak Web server. A Device Database Backups Dashboard now resides under the Administration | System webpage to view, download and delete database files that were exported to CorreTrak Web.

Device Name	User	Time Stamp	Manual Export	Download
Chris's Work iPhone	Administrator	04/29/2019 15:39:12	True	<a href="#">Download (115 KB)</a>
Chris's Work iPhone	Administrator	04/26/2019 20:46:12	True	<a href="#">Download (445 KB)</a>
iPhone 8 Plus	Officer Process	04/26/2019 17:29:39	True	<a href="#">Download (473 KB)</a>
iPhone 8 Plus	Officer Process	04/26/2019 17:29:03	True	<a href="#">Download (378 KB)</a>

## 2 Enhancement – “Reset App” Security Role has been Added

The new Security Role, "Reset App", has been added to the Edit Security Role page to assign users the ability to clear the device of all data as well as send backups of the local SQLite databases to the CorreTrak Web server for further analysis. Database backups captured from the “Reset App” feature can be viewed on the Device Database Backups Dashboard above.

## 3 Enhancement – Broadcast CorreTrak Server Information to be Discoverable by CorreTrak Mobile via UDP Beacon

CorreTrak Web UDP Beacon now broadcasts CorreTrak Web server information to be discoverable by CorreTrak Mobile via port UDP 35891. Once the CorreTrak Mobile device discovers a CorreTrak server, the CorreTrak URL will be set on the mobile device and successfully connected to the CorreTrak server when in Wi-Fi range and communication is available.

## Defect Fixes

### 1 Fix – Service Delivery Dashboard should return All Database Results

Previously, the Service Delivery Dashboard only displayed the top 1000 transactions. Now, all Service Delivery transactions will display in the table.

### 2 Fix – Error Message that occurs when Assigning Users to a Security Role

When assigning users on the Administration | Security Roles page, users are successfully assigned the Security Role and an error message no longer appears after selecting “Save”.

### **3 Fix – Report QR Codes did Not Render under Certain Conditions**

The “Wristband – By Housing Unit” and “Wristband – Single” reports now generate QR Codes no matter what value the application setting “QR Code Error Correction” is set to.

### **4 Fix – Duplicate Transactions Created in Movement Under Certain Conditions**

The Movement API has been improved to prevent the device from creating duplicate transactions under certain conditions.
